Phase I (Project Scope, Planning and Task Definition)

Date: 09/03/2022

Project Title

Flex Lens

Project Team

Team Designation	Name	UID	Section
Lead	Rohan Ghosh	20BCS9671	ON-813 B
Member 1	Jai Budhraja	20BCS5816	PH-711 B
Member 2	Kirti	20BCS7083	PH-713 B
Member 3	Anand Kumar Kannaujiya	20BCS5845	PH-712 A
Member 4	Liza Sharma	20BCS7097	PH-718 A

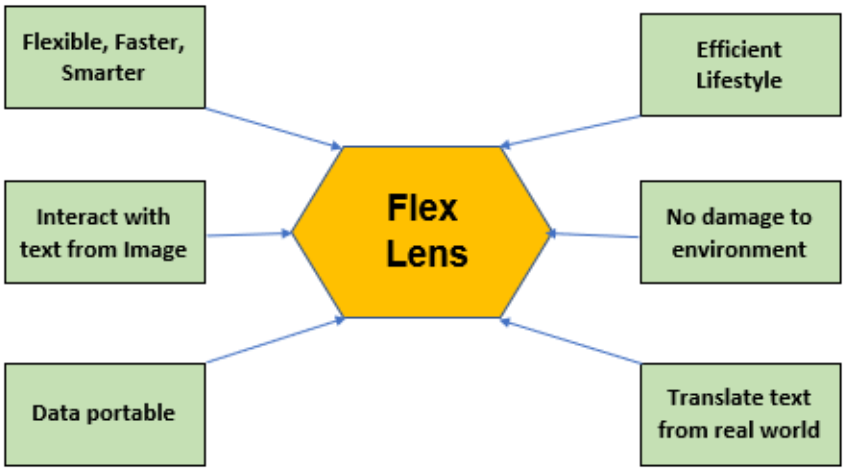
Project Scope

The project, **Flex Lens** is based on Deep Learning. We have introduced the concept of Convolutional Neural Network (CNN) to make an AI system which can recognize handwriting and detect object, since it automatically detects the important features without any human supervision and has very high accuracy in image recognition problems. Using Jupyter Notebook we have recorded our datasets and used Tensorflow for storing image data and object detection.

Our system is capable of identifying objects based on pre-stored image sets. Moreover, it is capable of capturing, storing new image sets and identifying them. Since, it is a self-learning system which will gather the experience for its self-development.

Project Planning and Task Definition

Project Planning:



TASK DEFINITION:

The Aim of the project is to recognize handwritten stuffs and digitize them for use in various purpose in this superfast evolving environment, where Metaverse is pep talk. And object detection and recognition for faster processing of intermediatory tasks. It has a widefield application in security cameras, for developing systems for physically disabled peoples, etc.

Conclusively, "**Flex Lens**" is a smarter, faster and better system for the flexibility in our day-to-day life. Hence, making the earth a better place.
